01 Instance
02 Select execution strategy
03 Record and decide
C body + contracts $R, E; \Gamma$
bindings θ e.g. $x = 13$
check schedule $\mathcal{B}$ entry-exit / all-boundaries
Inline: bodies and iterations
$r : 0 \to 1 \to \cdots \to 4$
r
13
4
copy observations; retain reached state
Modular: summary continuations
check boundary → instantiate legal model
contracts / invariants / assertions
sampled-model scope
shared QCP resource transfer
joint normalization of heap + live values
original VC check identity source / goal
automatic oracle + offline ITP
matched evidence
VCs → paths → scoped instance verdict entry + coverage gates: Fig. 3
strategy agreement requires boundary correspondence
